ASSIGNMENT- 1

Subject: Front end Technology

Subject Code: 25CAH-655

Branch Sec: 25MCD KAR 1

Submitted By:

Name: Drishiti Bhatia

UID: 25MCD10008

Submitted To:

Mr. Tuned Alam

Name: Drishti Bhatia

UID: 25MCD10008

Subject: Frontend Technology (25CAH-655)

Section: 25MCD KAR-1

Assignment - 1

Q1 What is Figma? explain its key features & why it is widely used in modern UI/UX design.

- Ans
- Figma is cloud based UI/UX design tool used for designing interfaces & prototypes
 - It runs in web browser, no installation is required
 - It supports real-time collaboration where multiple user can work together
 - Figma provides components & styles for consistency
 - Figma is widely used because it simplifies teamwork between designer & developer.
 - Figma is commonly used for web & mobile app design.
 - Due to its collaboration and accessibility it is widely used in modern UI/UX design

Q2. Difference between Designing and Prototyping in Figma. Explain with one real world eg.

Ans

Designing

1. Focus on visual appearance on UI
2. Includes layout, color, fonts & icons
3. Shows how interface looks
4. Screens are static
5. Used during initial design phase
6. Helps in defining UI aesthetics

Prototyping

1. Focus on interaction & user flow
2. Includes click transition & animation
3. Shows how interface works
4. Screens are interactive
5. Used for testing & validation
6. Helps in usability testing.

Real world Eg:

In a shopping app, designing creates product page layout while prototyping links the 'Buy Now' button to the payment screen.

Q3. What are Components & Styles in Figma? How do they help in maintaining consistency & saving time in large projects?

Ans

Components:

- They are reusable UI elements such as button, header & cards.
- They help maintain uniform design ~~sets~~ across multiple screens
- Components reduce repetitive work in large projects

Style

- style define reusable colors, text style & effects
- They ensure consistency in font & color schemes
- updating a style automatically updates all linked elements.

Importants in large projects:

- Components & style maintain design consistency
- They save time & reduce errors
- They improve collaboration among multiple designers.

Q4. Explain Auto-layout in Figma. How does it help in creating responsive design for different screen size?

Ans a) Auto layout:

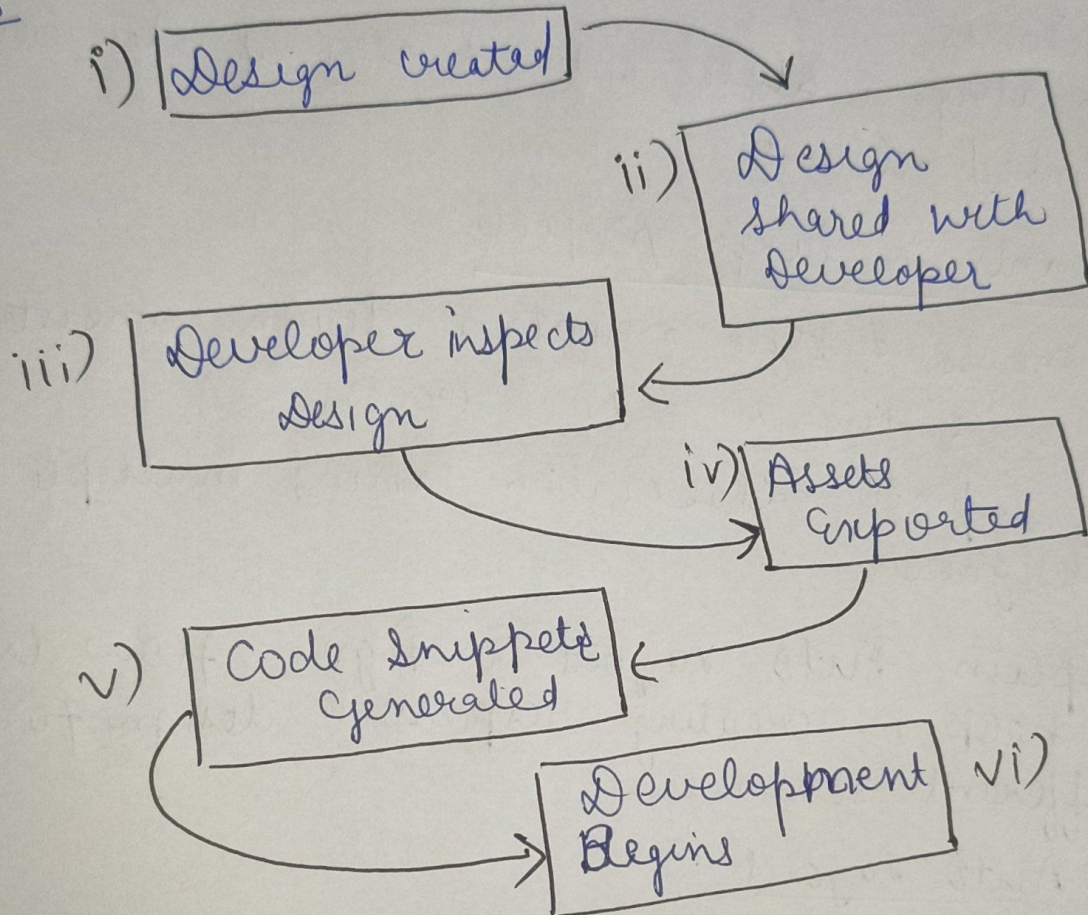

- It is a feature that automatically arranges UI elements
- It manages spacing, padding & alignment
- Elements resize based on content changes.

b) Role in Responsive Design:

- Auto layout helps create flexible layouts
- Design adapt easily to different screen size
- It reduces manual resizing work
- Useful for mobile, tablet & desktop designs.

Q5. Describe the complete developer handoff process in Figma. How are designs shared, assets exported & code snippets generated for developer?

Ans

* Developer Handoff in Figma

- It is process of transferring design from designer to developer
- It ensures developer understand layout, style, assets and interaction
- Figma provides built in tools to avoid ~~and~~ manual documentation.

* Design sharing:

- Designer share files using view or inspect
- ^{access} Developer can view screen, components & prototype
- Real time updates ensure everyone sees the latest design

* Asset exporting

- Icons & images can be exported as PNG, JPG or SVG
- Developers can download assets directly from Figma

* Code Snippet Generation

- Figma automatically generates code snippets
- supports CSS, iOS (Swift) & Android (XML)
- Developer can copy exact values for colors, fonts & spacing

* Advantages

- Reduces communication gaps
- Saves development time
- Minimizes design to code error.
